

Encompassing high priority research areas such as bioenergy production, global warming mitigation, and sustainable agriculture, biochar has received increased worldwide interest in the past decade. Biochar: Production, Characterization, and Applications covers the fundamentals of biochar including its concept, production technology, and characterization. The book builds on this foundation by providing examples of state-of-the-art biochar application technology in agronomy and environmental sciences, along with detailed case studies. Edited by a group of well-known biochar experts and including chapters written by a group of international experts in their field, this valuable resource can be used both as a textbook for graduate courses or as a handbook for policy makers and practitioners in the field.

Batteries Not Included, Lectures on boolean algebras (Van Nostrand mathematical studies), Handbook of child psychiatry and psychology, Clinical Implications of Attachment (Child Psychology Series), ISO 2574:1994, Aircraft - Electrical cables - Identification marking, Lock-in (Night Fall), The Chelsea Green Reader: Selections from 30 Years of Independent Publishing, 1984-2014,
