

Science can explain a lot of things – from the laws of physics to the planetary movements. There are some things that still elude science, and science itself confirms that certain phenomena are beyond the standard laws as we know them. The laws of physics exist, and are accurate, however we cannot determine that they are complete. How and what does that say for us here, and how we live? What is possible if we open our minds? What can be done, if we went beyond the laws of science and physics? We are not crazy, and can say, with science behind us, that indeed, we are not. Ready to explore science in a new way and relate it to the energy that we love to explore? You may not agree completely with us, but you will find it hard to prove we are wrong. Explore science and see what hypothesis you come up with. Continue this reading about energy with the following books: We Love Energy Too!
